SAMUEL DAVID GELVEZ RODRÍGUEZ

SOFTWARE DEVELOPMENT TECHNICIAN | JUNIOR BACKEND DEVELOPER

Location: Bucaramanga / Piedecuesta, Colombia **Phone:** +57 305 265 4240 **Email:** samueldavidgelvezr@gmail.com
LinkedIn: linkedin.com/in/samuelgelvezdev **GitHub:** github.com/Samuelgelvez20 **Portfolio:** samuelgelvez20.github.io/PORTAFOLIO

PROFESSIONAL SUMMARY

Junior Backend Developer trained in Campuslands high-performance ecosystem, with a solid foundation in software engineering, modular architectures, and multithreading concurrency. Specialized in building scalable RESTful APIs with Java 21 (Spring Boot, JavaFX) and Python (FastAPI), applying SOLID principles, Hexagonal Architecture, and Domain-Driven Design (DDD). Proficient in relational database design with PostgreSQL and MySQL, JDBC, and Docker containers in Linux environments. Known for analytical thinking, methodical problem-solving, and assertive communication in agile teams.

TECHNICAL SKILLS

Backend Development & Languages: Java 21, Spring Boot, Python, FastAPI, JavaFX, Multithreading Concurrency (ExecutorService, Runnable), JavaScript (ES6+), SQL.

Databases & Persistence: PostgreSQL, MySQL, JDBC, Structured JSON persistence, Docker Compose containers.

Architecture & Best Practices: Hexagonal Architecture (Ports and Adapters), Domain-Driven Design (DDD), SOLID Principles, Clean Code, RESTful API Design.

Tools & Environments: Docker, Docker Compose, Git, GitHub, Maven, Pydantic, LangChain, Linux.

Work Methodologies: Scrum, GitFlow, Conventional Commits.

FEATURED TECHNICAL PROJECTS

Heavy Machinery & Construction Rental Platform Featured Project | GitHub
Role: Backend & Full-Stack Developer *Java 21, Spring Boot, PostgreSQL, Docker, Maven, React, TypeScript*

- Architected modular backend using Hexagonal Architecture (Ports and Adapters) and DDD principles, ensuring complete decoupling between business core and infrastructure layers.
- Implemented robust RESTful services for reservations, machinery availability, and billing, backed by containerized PostgreSQL with Docker.

Tribunal Bimmer – AI Vehicle Perception & Classification Featured Project | GitHub
Role: Backend & AI Developer *Python, FastAPI, Pydantic, JSON, LangChain, Docker*

- Developed a high-performance RESTful API in FastAPI with strict Pydantic validation schemas and JSON persistence to classify BMW vehicle perception metrics.
- Orchestrated semantic inference pipelines with LangChain in real time, encapsulating the entire environment in Docker for reproducible deployments.

SICA – Integrated Access Control System (Acme Zone) Featured Project | GitHub
Role: Desktop & Database Developer *Java 21, JavaFX, PostgreSQL, Docker, Maven, JDBC*

- Engineered a desktop application with JavaFX and layered architecture to digitize physical security and visitor control for a corporate hub with 30+ companies.
- Implemented visitor pre-registration, gate check-in/check-out validation, incident logs, and transactional audit trails via JDBC connected to PostgreSQL in Docker.

F1 Simulator – Multithreaded Race Simulation Featured Project | GitHub
Role: Java Backend Developer *Java, Concurrency (ExecutorService), JavaFX, PostgreSQL, Docker*

- Engineered multithreaded concurrency running each race driver in isolated threads (Runnable, invokeAll), calculating dynamic telemetry, tire degradation, and penalties.
- Persisted historic lap records and telemetry rankings into a PostgreSQL database orchestrated with Docker Compose.

EDUCATION & ACADEMIC TRAINING

Campuslands – Software Development Technician Floridablanca, Santander | Jan 2026 – Dec 2026
High-performance immersive training: computational logic, enterprise backend (Java 21, Spring Boot), databases (PostgreSQL), decoupled architectures, GitFlow, and Scrum.

Instituto Promoción Social (IPS) – Academic High School Diploma Piedecuesta, Santander | 2025

LANGUAGES & INTERPERSONAL SKILLS

Languages: Spanish (Native) · English (B1 / Technical proficiency)

Soft Skills: Assertive communication · Team collaboration · Critical thinking · Problem-solving
